

# Module 4 – Exercise

## Enhance Your Keylogger

- ✓ The generated keylogs.txt was on the same directory as the keylogger.exe, it was very obvious to the user that someone is grabbing the pressed keys, in a previous video we used temp directory to store screenshot image, try to use the same procedure to store the keylogs, make sure that you don't remove the temp directory until you grab the file back to the attacker machine.
- ✓ Find a way that we can stop the keylogging using our shell.

### Hints

- ✓ See module 3 lecture 6 for handling temp directories
- ✓ Use `obj.UnhookKeyboard()` to stop the keyboard hooking
